Stone Stops: \$4 Each

(Bump ring color may vary).

Stone Bump Stops: Quick and easy, for tool-free use with *any* WE guide rods, above and/or below the sharpening stones.

Preset stops to limit the sharpening stone's slide range. To better direct your sharpening effectiveness. Helps prevent unexpected knife blade damage caused by stones sliding down below or up over the knife edge while gliding along the guide rods.

Position lower stops to support sharpening stones while leaning against bevels for more consistent angle cube readings and better resulting bevel angles.

[Go to Index](#)

Stone Stop Recommendations:

Lower stops (2) only for standard 8" guide rods

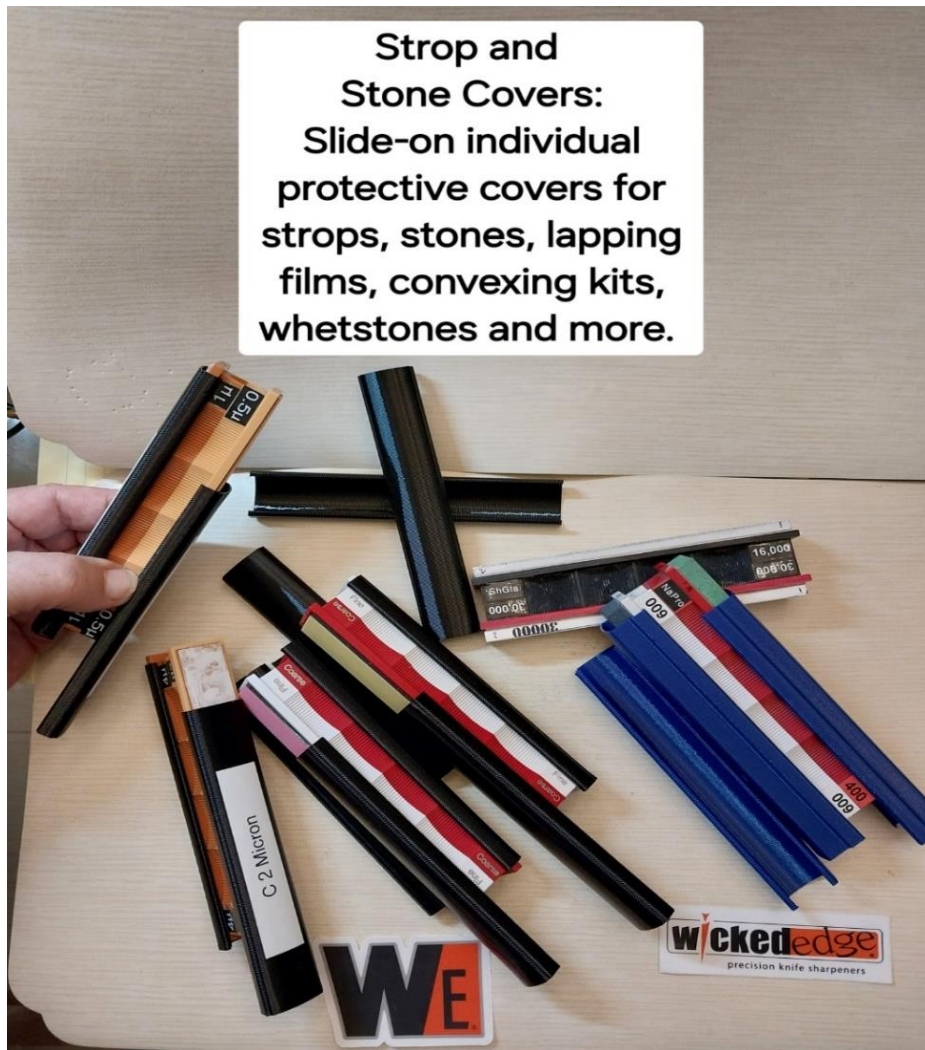

Upper/lower stops (4) recommended for rods > 10"

Stone stops let you preset the upper and lower stone stopping position, on your guide rods, to prevent unexpected scratches and damage on the blade steel and knife edge.

The upper stop prevents the stones from sliding too far up the guide rods, and then off the knife edge. The following downward stone stroke usually collides down onto the bevel!

The lower stop prevents the stone's top edge from sliding down the guide rods below the knife edge where it may scratch the knife sides inadvertently while sharpening.

Wicked Edge Expert Corner Group: Accessories Catalog

Strop/Stone individual covers (black) \$3 each

Tall-Stone individual covers (blue) \$4 each

Easy, slide-on protective covers. Can be used with any Wicked Edge mediums: diamond stones, leather strops, ceramic stones, lapping films, and Convexing kits.

Tall-Stone covers fit taller aftermarket whetstones.

Keep your mediums clean and protected from cross contamination and dirty environments.

Non-Magnetic Stone Adapters \$20 each

Non-Magnetic Stone Adapters: Complete, easy, ready to use, strap-on adapter. Allows the use of a magnetic digital angle device with non-magnetic sharpening and polishing mediums on any Wicked Edge handles, (any thickness). Useful with whetstones, ceramics, lapping and/or convexing films, and strops.

Finger Guards: \$10/pair

An easy-to-use, slide-on, physical barrier safety shield between your fingertips and a Wicked Edge sharpened knife. Compatible with all Wicked Edge and Uni-Handles.

Finger guards simply slide down over stones and ride with the stones as they glide up and down the guide rods. Shields work in conjunction with stone stops.

Finger guards also enhance lateral stability to help provide consistent, full, flat stone contact against knife edges.

**Scope Users Kit:
Allows protected access
to focus ring and
shutter discharge, with
lens shroud hood.**

Scope User's Kit \$18

USB Microscope User's Kit:

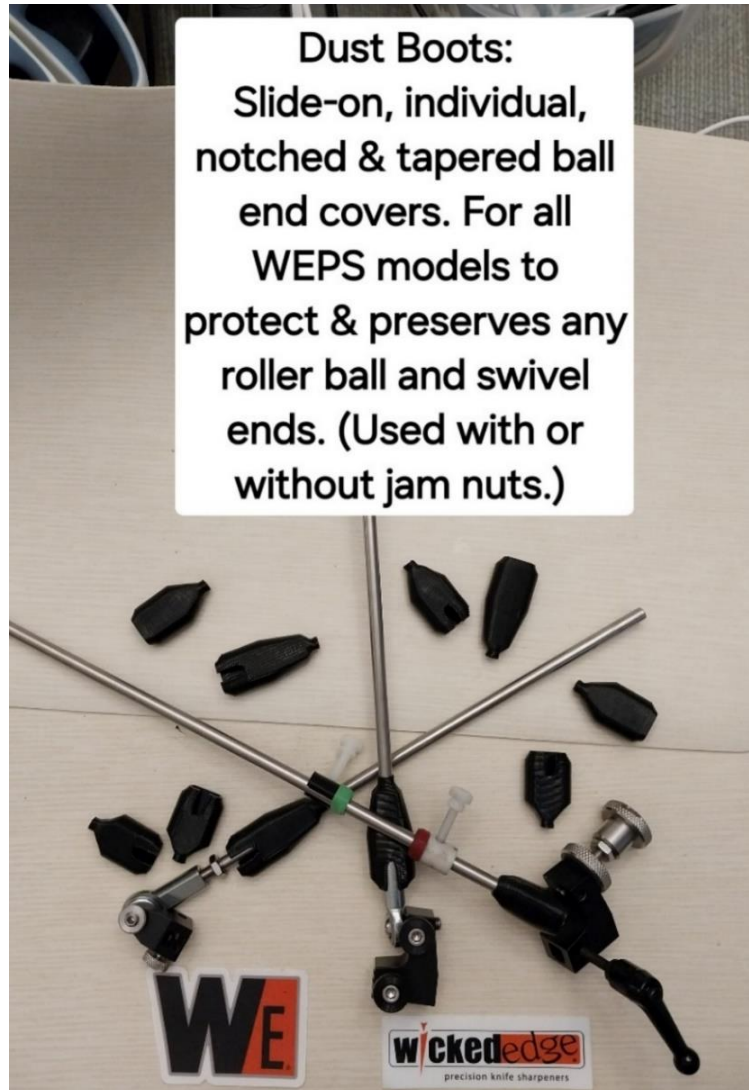

For Plugable USB 2.0*

*(see: Amz or eBay)

Microscope User's Kit: provides protected ready access to focus ring and shutter discharge. Avoid constant re-focusing at high power. Lens shroud cover provides glare shade, knife edge cut protection, improved bevel position and hold, w/ indexing notch.

Dust Boots \$4 each

Dust Boots: *preserve* roller ball guide rod swivels. Notched and tapered to tightly fit down over guide rod ball ends to keep knife sharpening dust out, without inhibiting the free rotation.

For any Wicked Edge, *threaded-end* guide rods, with roller ball end swivels, (WE1## and Gen 3 Pro models) *

*(versions for tall or short rod-end sockets, with or without jam nuts).

Wicked Edge Expert Corner Group: Accessories Catalog

Pivot Keepers \$6/pair

Pivot Keepers:

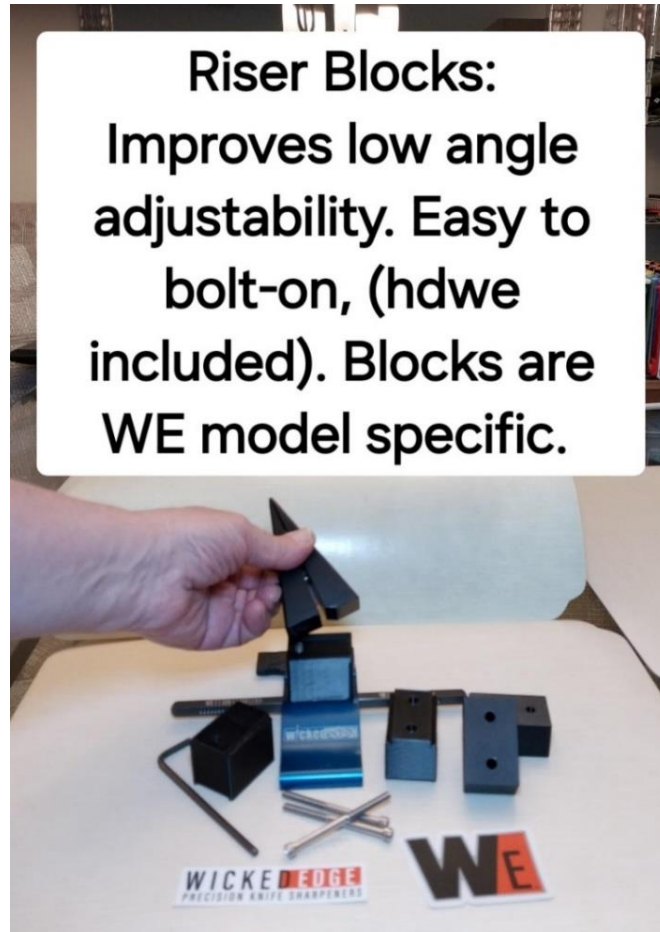

Avoid losing pivot races required to use ball-end guide rod systems (WE40/60/66).

Pivot keepers easily stretch and slide over the WE60 Series micro-adjuster lock-knobs. Stays prominently attached for quick, easy access. Prudent use prevents pivot race loss when guide rods are removed. *

*(Guide rods cannot be positioned for use without pivot race).

\$40. w/hardware (Model Specific)

Riser Blocks: (Basic) improves WE's working geometry by increasing the height between bracket ball end swivels and clamped knife edges. Improves low angle adjustability to achieve lower bevel angle settings, before needing to use a low angle adapter, (LAA).

Allows more effective use of the sharpening stone's entire length for better stone wear and efficiency.

Bolt-on, removable, accessory.

Requires longer guide rods to utilize height advantage.

Uni-Handles:

These universal stone holder handles were designed and produced by experienced WEPS users. They provide the same ergonomic feel and user's experience we are used to when using WEPS original stone handles. They were designed simply with function first in mind.

These universal handles allow users with sharpening and polishing mediums from other brands of guided sharpeners and other aftermarket mediums, to utilize those plated mediums, (used in pairs), with any WEPS model.

For:

- 1"x4" KME style, flat ended plates
- 1"x 6" Edge Pro, TSProf, Hapstone style pointed ended plates.

Handles require provided hex tool to position and secure plated stones. No tensioning or adjusting. Steel plates are embedded in the handles to allow easy use of magnetic digital angle cubes.

Uni-Handles are compatible with Finger Guards and Stone stops.

Ed Kenny Micro-Angle Adjuster Kits:

These screw-in micro-angle adjusters are a direct replacement for all WE130/1## and Gen 3 Pro versions, (any manufacture date).

Consistent, repeated results improve with consistent repeated angle readings and locked guide rod angles. Discerning users may verify to fine-tune micro-angle stone settings with each grit change. This is especially important when using a multitude of sharpening, polishing and stropping mediums, of various thicknesses.

These upgrade kits improve the ease of making and securing micro-angle adjustments. Large knobs and thumb wheels provide precise, tool free dial-in precise angle settings with secure locking, while working with a digital angle cube.

WE130/1## Kit fits both the larger, old-style, squarer shaped, “L” brackets and newer more tapered, compact, mini “L” brackets.

Quick-lock arms allow quick, easy, tool-free, positioning of “L” brackets for gross angle settings.

Stabil-Rizer Clamping System Kits:

This is a screw-on **Wicked Edge** accessory to expand ease and usefulness for all Wicked Edge Precision Sharpeners. The clamping systems provide vertical and lateral support and stability for large, long and flexible knives, while enhancing the low angle range.

The riser block base expands the WE's geometry to enhance low angle adjustability by increasing the height between the guide rod's rotating ends and the clamped knives' edge.

This helps avoid the need to use a low angle adapter, (LAA), so you can clamp most knives directly in the vise.

The *balanced* **Stabil-Rizer Clamping System** easily assembles to improve sharpening ease for full-size Chef's Knives at low bevel angle settings. It provides adjustable tip-end and/or handle-end positioning, stability, and support, where and when it's needed.

Avoid long and large knives, from flexing, or slipping and rotating while in the WE clamp. Stability and rigidity help improve sharpening outcomes for full-size knives.

Stabil-Rizer Clamping System Kits

\$160.00*

*Complete kit with hardware, & installation video. No modifications required.

Full product support provided.
